

## Price List - Cable Tools - November 2007

1. Before ordering, please contact us by phone or email, to discuss cable preparation. Cable tool configuration involves more than a list of parts, and we want to make sure you get what you need. Our Cable Preparation Worksheet summarizes the information we need to help you select the right equipment. In many cases, it may be better to have AG Devices fabricate the cables, instead of buying equipment to do it in-house.
2. If you are using a bonded cable or your cable pitch is not a standard spacing listed below, please send us a sample of your cable.
3. For separation of conductor groups, or for special/custom work, please contact us.
4. Our standard shop rate is generally \$80.00/hour.
5. Disc tolerances are held to  $\pm 0.0001$ " thickness.
